## **ABSTRACT**

The Idaho National Engineering and Environmental Laboratory Environmental Restoration Program has implemented the Comprehensive Environmental Response, Compensation, and Liability Act process to identify and manage risk to human health and the environment at the Idaho National Engineering and Environmental Laboratory. This comprehensive remedial investigation/ feasibility study (RI/FS) for Waste Area Group 6 and 10, Operable Unit 10-04 describes the background and regulatory history of the INEEL, describes field investigations and the nature and extent of contamination at the sites of concern, defines the risks to human health and the environment, and develops remedial alternatives that will reduce risks to acceptable levels. For ecological receptors, this is the INEEL-wide cumulative and comprehensive document that calculates overall risk.
